September 19, 2016 • Hyatt Regency Inner Harbor, Baltimore, MD

Securely accessing and using the right health data when and where it is needed

8:30 – 8:40 a.m.

Welcoming Comments

Charles Jaffe, MD, PhD, CEO, Health Level Seven International

Keynote Addresses

A stellar group of senior leaders in government, academia, healthcare providers and healthcare technology have been invited to present in a series of keynote sessions reflecting on the past and looking forward to the future, focusing on the importance of data standards in achieving interoperability and improving healthcare.

8:40– 9:10 a.m.

Keynote Session 1:
Progress Toward Higher-Value Health Care: Biomedical Innovation, Better Evidence, and Clinical Data Standards

Interest and activity around payment reform, new delivery models, and supporting electronic data infrastructure is increasing, with implications for the development of evidence of medical technologies, and how those technologies are used. Dr. McClellan will highlight some important recent trends in these areas, and the implications for clinical data standards and incentives for exchanging and using clinical data.

Mark McClellan, MD, PhD, inaugural director of the Duke-Robert J. Margolis, MD, Center for Health Policy at Duke University. Formerly, Administrator of CMS and later a senior fellow and director of the Health Care Innovation and Value Initiatives at the Brookings Institution.

9:10 – 9:40 a.m.

Keynote Session 2:
Remarks by the Commissioner of the FDA

Robert Califf, MD, Commissioner of food and drugs at the United States Food and Drug Administration. Prior to joining the FDA, Dr. Califf was a professor of medicine and vice chancellor for clinical and translational research at Duke University.

9:40 – 10:10 a.m.

Keynote Session 3:
Progress → Rising Expectations: Standards, Interoperability, Health, Research

A look in the rearview mirror reveals miles of progress in the deployment of electronic health records (EHRs) – and in the adoption of health data standards. The HITECH Act of 2009 and its implementing regulations were blunt and imperfect instruments for advancing use of terminology standards, but they were nonetheless effective in forcing a level of use that prompted collaborations, improvements, and new tools for implementers. The array of heavily used interoperability products and services available from NLM and others is substantially greater than it was in 2009, but significant interoperability challenges remain. How NLM can best partner with other agencies and organizations to advance interoperability across health care, public health, and research will be a key issue for the strategic planning process recently initiated by NLM's new Director.

Betsy Humphreys, MLS, Deputy Director, National Library of Medicine, NIH, HHS

Panel Presentation: HL7 Blast from the Past

Moderated by
Ed Hammond, PhD

Panelists:
Sue Campbell, Wayne Tracy, Clem McDonald, MD

NOW & THEN; THEN & NOW

This will be a brief look back to the early years of HL7 from a Board Chair's perspective and how those experiences translate into today's healthcare challenges and issues.

Sue Campbell, Trustee and Treasurer, North Sonoma Health Care District; Former Board Chair, HealthLevel Seven (1991-1993)

What I Learned from 45 Years in the Field

1. Technology is the most tractable of challenges—the sociology is not.
2. Big data in healthcare will be a failure unless the data representation issues are resolved.
3. Among the most important issues is workflow and ease of use while still maintaining robust data representation.

Wayne Tracy, Former President and COO of Health Patterns, LLC

As Essential as the Air We Breathe: Standardizing Vital Data for Healthcare Since 1984

As an intern at Boston Harvard hospital, it took 4-6 hours to gather all of the data needed to manage a new patient. I dreamed of such data being as immediately available as air – just 'breathe' it. In 1972, at Wishard Hospital in Indianapolis, we built an electronic medical record (EMR) – one of the very first – in pursuit of that goal, but the interface between the data sources and the EMR was our heart of darkness. The methods we were using to gather and display the data (screen scraping, printer output capture, and smiley faces) were too hazy and fragile. We needed message and coding standards. In 1984, with Ed Hammond and others, we proposed a message standard (PMID: 6571270) that went on to become ASTM 1238-88. Then, with generous help from Don Simborg and Wes Rishel, it became part of the order entry (Chapter 2), and all of the observation reporting (Chapter 7). The Wishard EMR grew into the first and largest health information exchange (HIE) – now carrying 4 billion results – and without Version 2 messages it could not have happened.

Clem McDonald, MD, Director, Lister Hill National Center for Biomedical Communications

11:15 – 12:00 p.m.

Keynote Session 4:
The Digital Dividend of Meaningful Use and Standardization: Accelerating Learning Healthcare and Continuous Improvement

The interoperability standards embraced in Meaningful Use support not only transportable patient care information, but also "practical research," the underpinning of a learning health system. The "digital dividend" of the Meaningful Use program is that healthcare data is now available in digital format, which can be used to improve care, whether it is on the individual patient, or patients in aggregate.

The promise of clinical informatics post-Meaningful Use is to provide insights not readily visible to the human mind. The concomitant advancement of natural language processing, distributed computing, real time processing and advanced "Big Data" analytics and visualization techniques has created enormous potential to improve quality of care and reduce its cost.

Dr. Perlin will describe and discuss with the audience how healthcare providers, policy-makers, and payers are increasingly using emerging data assets for higher-value, safer, and higher-performing healthcare.

Jonathan Perlin, MD, PhD, President, Clinical Services and Chief Medical Officer of Nashville, Tennessee-based HCA and their 169 hospitals and more than 800 outpatient centers and physician practices.

12:00 – 12:25 p.m.

Keynote Session 5:
The Future of Interoperability at UHN

This presentation will provide a brief overview of the current state of interoperability and the EPR at UHN and the strategies that have been deployed to date within the organization and within the province of Ontario to create an EHR. The presentation will provide an overview of current thinking on what it takes to build a better learning health system and the technology and information challenges UHN faces in getting there.

Jim Forbes, Chief Technology Officer, University Health Network, Toronto, ON, Canada

12:25 – 12:30 p.m.

Closing Comments/C-CDA Rendering Tool Challenge

Pat Van Dyke, Chair, HL7 Board of Directors

Steve Posnack, Director, Office of Standards and Technology, ONC

GENOMICS CONFERENCE

The Future of Cancer Genomics, Interoperability and Precision Patient Care

October 26 – 27, 2016
House of Sweden, Washington DC

Despite being less than a decade old, the field of cancer genomics is making significant progress towards early detection of cancer and targeted treatment plans for patients. Join HL7 at this unique two-day event to learn how genomics, interoperability and cancer detection/care are pioneering new pathways in the field.

Hear from more than 50 leaders, including these confirmed speakers:

- *Jon White, MD,* Deputy National Coordinator, Office of the National Coordinator for Health Information Technology, U.S. Department of Health and Human Services
- *Taha Kass-Hout, MD, MS,* Founder, Kass-Hout Consulting, former Chief Health Informatics Officer, FDA
- *Rahul Dubey,* Senior Vice President, Innovation and Solutions, AHIP
