OVERVIEW

The Da Vinci Project’s enables providers and payers to positively impact clinical quality, cost, and care management outcomes by demonstrating how HL7® FHIR® can create scalable solutions to exchange critical data to fuel value-based care (VBC) models. Projects create Implementation Guides (IG) and Reference Implementations (RI) to power the industry to automate payer and provider collaboration.

Over 2018, the founding members of Da Vinci prioritized work on four initial use cases. With the combined power of program funded consultants and in-kind subject matter experts, the team brought real world inputs that shaped the design and content to create initial IGs and RIs for 30 Day Medication Reconciliation Post Discharge/Data Exchange for Quality Measures and Coverage Requirements Discovery through HL7 ballot and process.

In 2019 members continue to commit time, knowledge and resources to support in flight use case development. Teams’ focus is on efficient exchange of clinical data that is timely, appropriate and specific i.e., data available from a payer to inform provider about a new patient vs smaller data set required for a provider to attest to a quality measure during a routine workflow. Active use cases are transitioning into public meetings.

Da Vinci invites potential implementers to join the growing community around VBC to exercise IGs and RIs at Connectathons, provide feedback during public calls, or implement directly between trading partners. New 2019 use cases are selected, starting the next wave to define business and technical requirements to fuel IG development, build specific reference implementations, offer open sandbox environments and test-focused development model to ensure requirements meet needs of larger community.

2019 USE CASE INVENTORY & STATUS

PROJECT PROCESS

- Define requirements (technical, business and testing)
- Create Implementation Guide
- Create and test Reference Implementation (prove the guide works)
- Pilot the solution
- Deploy the solution

WHERE TO FIND DA VINCI AT HIMSS19
ARCHITECTURAL APPROACH

1. Adopt Standards
Adoption of existing and emerging standards with broad support to create viable solution for Da Vinci goals, particularly:
• FHIR® as the core
• NCQA® HEDIS®
• CDS Hooks®
• SMART on FHIR®—layering in OAuth security
Leverage the work of others:
• Support existing FHIR versions
• Adopt existing profiles where possible eg, Argonaut®, US-Core, QI-Core

2. Build Using the Best Tools
• Aegis® Touchstone for test environment
• HSPC® Sandbox environment to create and support reference implementations
• Lantana Trifolia® to create implementation guides

3. Design Frameworks
• Data Exchange for Quality Measures framework.
• Coverage Requirements Discovery
• Documentation Templates and Rules

4. Create Reproducible Processes
Collaborative use case discovery and development focused on payer/provider workflows and information requirements yielding:
• Quality, balloted implementation guides
• Reference implementations to support sandbox testing
• Test scripts and process
• Deliver balloted standards ready for testing and adoption

5. Build Using the Best People
Continue to use FHIR experts to design and build the standard implementation guide templates and processes.

Get Involved!
Join Da Vinci to implement existing and emerging Implementation Guides
HL7 Connectathons:
May: Montreal
June: DevDays
September: Atlanta
Follow our progress: https://confluence.hl7.org/display/DVP/Da+Vinci
• Listserv sign up
• Track Progress
• Sign Up for Lists in HL7 workgroup calls give feedback on inflight use cases
• Use implementation guides and reference implementations
