

MDHT on FHIR®

Overview and Roadmap for Model Driven Health Tools (MDHT)

Dave Carlson, Ph.D.
MDHT Project Lead
<http://ClinicalCloud.solutions>
dcarlson@xmlmodeling.com

January 10, 2016

MDHT Summary

- Model Driven Health Tools (MDHT) is an open source software project at Eclipse.org
 - Supported by VA, ONC S&I, FHA, IBM, & others since 2008
- MDHT supports a full lifecycle standards development process, providing a solution that allows standards designers and implementers to actively collaborate
- Consolidated CDA (C-CDA)
 - Continuous ONC contract support for creating and maintaining all versions of C-CDA specifications in UML using MDHT editor
 - Complete UML models containing all conformance rules for HL7 specifications from C-CDA 1.0 through current C-CDA 2.1
 - MDHT Generated Java programming library for C-CDA is adopted by several major EHR vendors and 100's of other developers

MDHT at Eclipse.org

- Open Health Tools organization will dissolve and become a new HL7 “Open Source” work group in January 2016
- Model Driven Health Tools (MDHT) project has migrated to Eclipse.org
 - <https://projects.eclipse.org/projects/modeling.mdht>
- MDHT source code at Eclipse.org
 - Initial contribution to Eclipse git repository completed in Nov 2015
 - Core
 - CDA tools
 - FHIR profile import/export and design
- MDHT project intends to be active participant in new HL7 WG

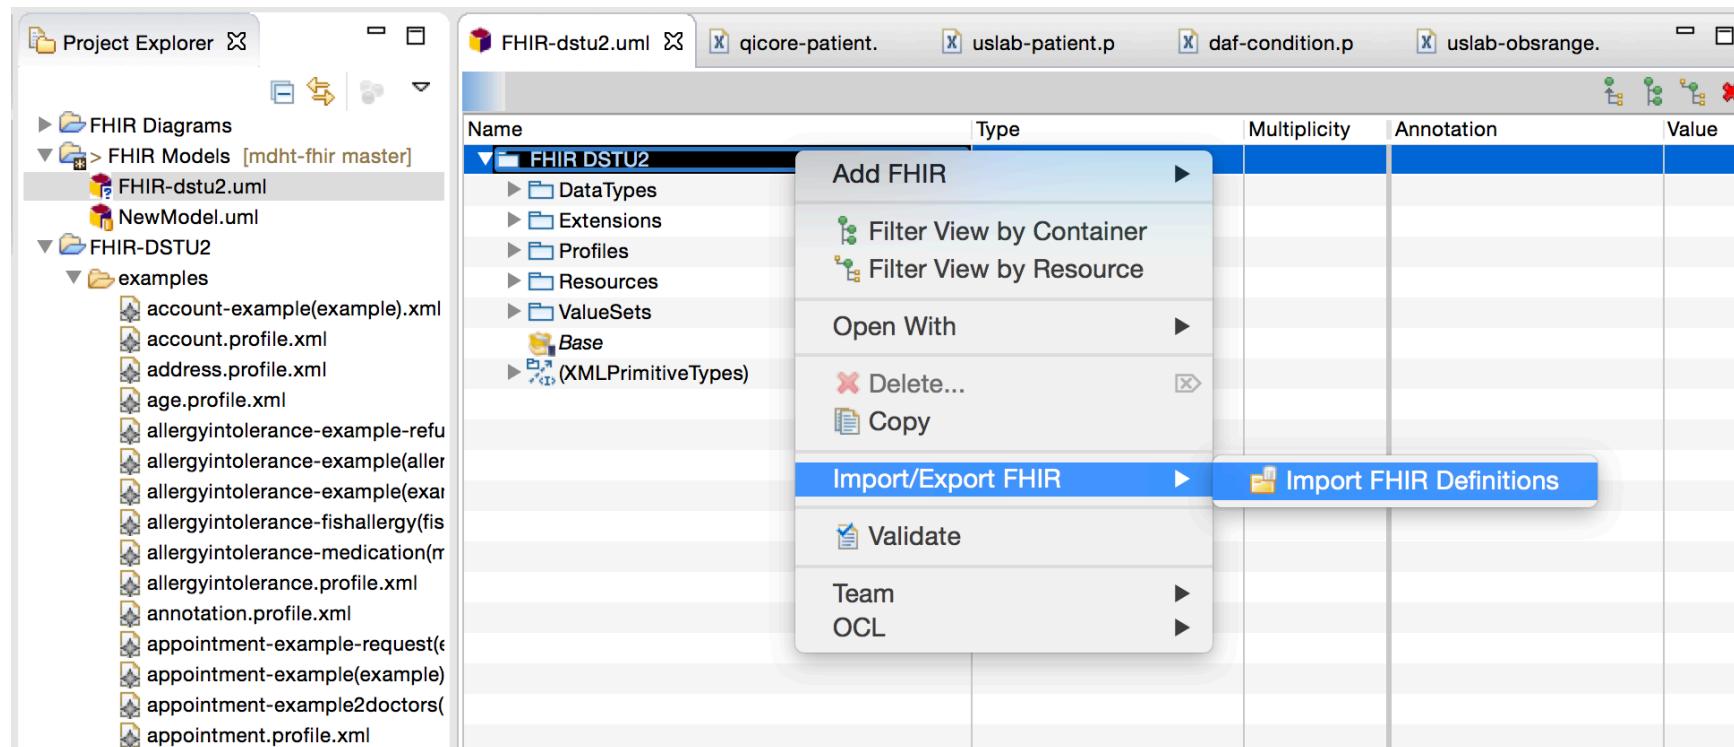

MDHT Roadmap

- MDHT on FHIR
 - Profile design in UML, with terminology services
 - Import/Export FHIR conformance resources
 - StructureDefinition, ValueSet, DataElement, Operation, etc.
 - Generate code from profiles: Java, Swift, ??
- C-CDA UML Models
 - Maintenance support from ONC
 - Java implementation, validation
- Contributions from NEHTA
 - .NET generator for CDA UML
 - Schematron generator for CDA UML
- Model & Instance Mapping: MDHT + MDMI
 - Model-Driven Message Interoperability (MDMI) OMG Standard
 - Part of Tues Q6 BOF: Mapping Languages for FHIR

MDHT on FHIR: Initial Scope

- Define UML profile and representation for FHIR specs
- Import FHIR StructureDefinition & ValueSet resources
 - Datatypes, Core Resources, Constraint profiles, Extension definitions
- Export FHIR StructureDefinition & ValueSet from UML
- MDHT UI enhancements for FHIR profile design
 - Reuse UML table editor (same as CDA editor)
 - Add customized menu commands and property view tabs for FHIR UML stereotypes
 - Integrate FHIR terminology services for ValueSet design
- This initial feature set was supported by an ONC Federal Health Architecture contract (summer 2015)

Import FHIR DSTU 2+ to UML

HL7 FHIR Publication for Condition

4.3.3 Resource Content

UML FHIR Condition (Dynagram)

FHIR Constraint Profiles in UML

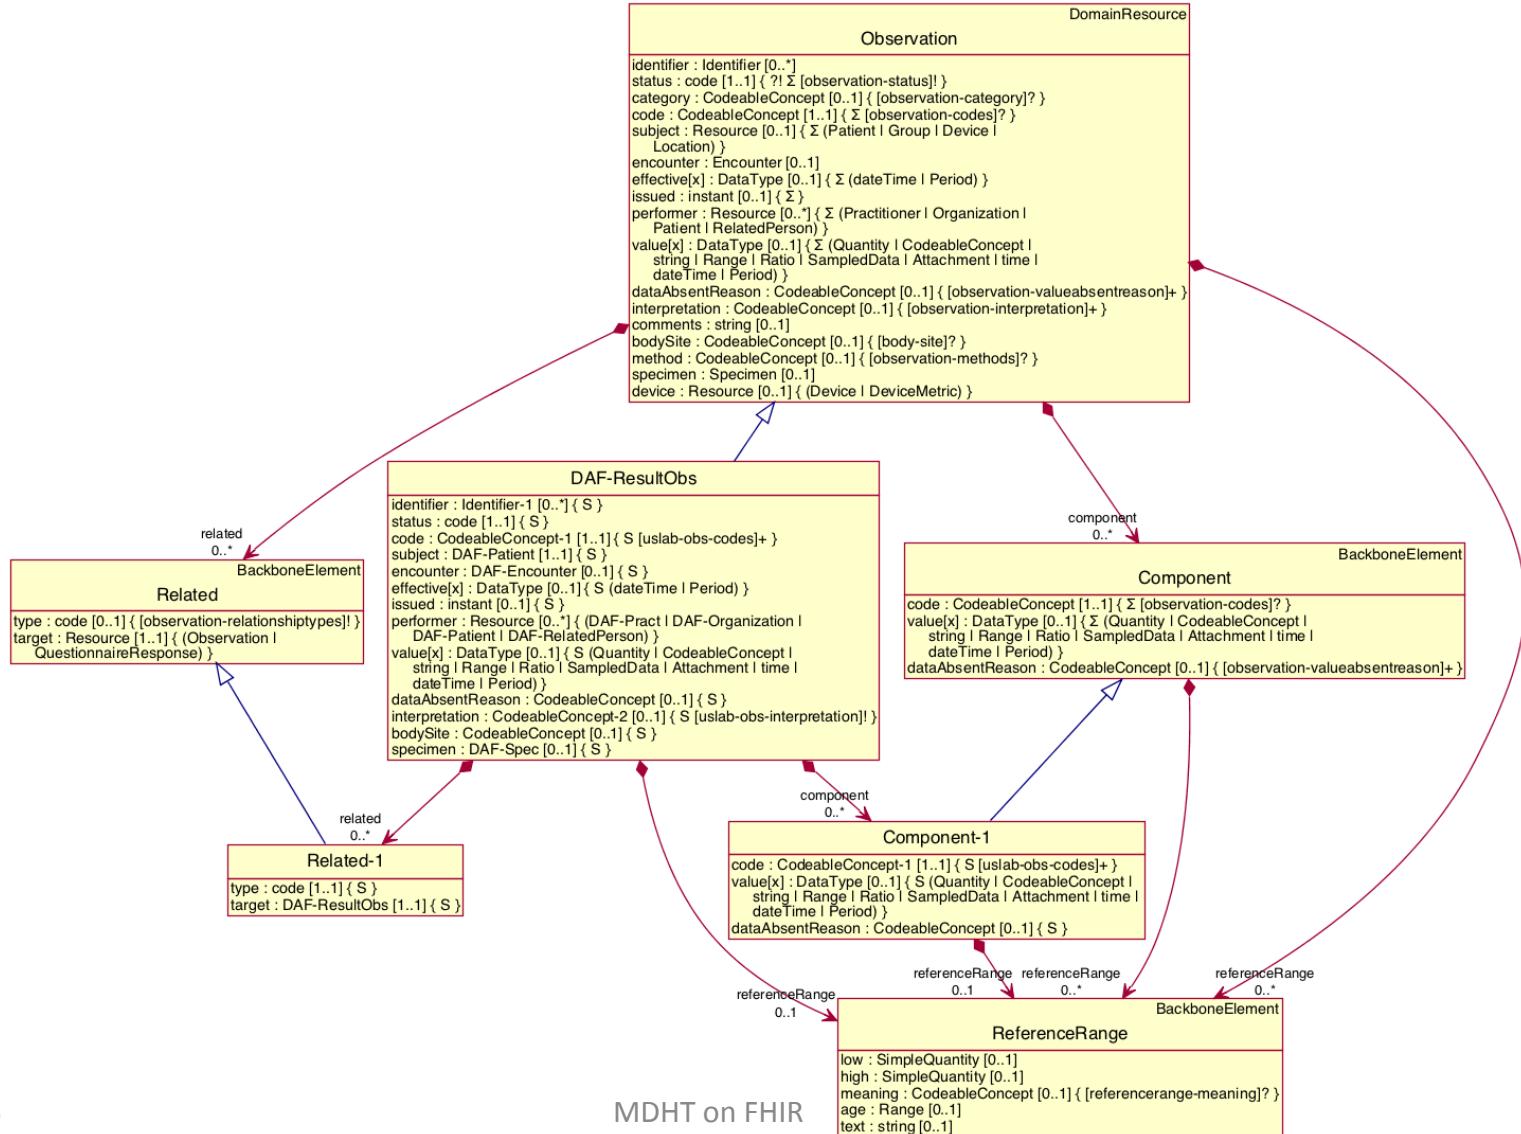

- FHIR profile must have one base type:
 - Core data type (e.g. Quantity)
 - Core resource (e.g. Observation)
 - Another profile (no limit to profiles constraining other profiles)
 - See <http://hl7.org/fhir/profiling.html>
- MDHT UML modeling style for FHIR
 - Define mapping for FHIR StructureDefinition and ValueSet to UML model elements
 - Reuse existing UML semantics, whenever possible (e.g. Property subset or redefine)
 - Define UML stereotypes for additional FHIR metadata
- UML modeling style is similar to MDHT CDA templates

FHIR Profiles: DAF-ResultObs

FHIR Terminology Services

6.21.18 Resource ValueSet - Operations

This resource has 3 operations associated with it:

\$expand	Value Set Expansion
\$lookup	Concept Look Up
\$validate-code	Value Set based Validation

For more information about operations, including how they are invoked, see [Operations](#).

6.21.18.1 Value Set Expansion

The definition of a value set is used to create a simple collection of codes suitable for use for data entry or validation. If the operation is not called at the instance level, one of the in parameters identifier, context or valueset must be provided. An expanded value set will be returned, or an OperationOutcome with an error message.

[Formal Definition \(as a OperationDefinition\)](#).

URL: [base]/ValueSet/\$expand

URL: [base]/ValueSet/[id]/\$expand

In Parameters:					
Name	Cardinality	Type	Binding	Profile	Documentation
identifier	0..1	uri			A logical value set identifier (i.e. ValueSet.url). The server must know the value set (e.g. it is defined explicitly in the server's value sets, or it is defined implicitly by some code system known to the server)
valueSet	0..1	ValueSet			The value set is provided directly as part of the request. Servers may choose not to accept value sets in this fashion

Creating FHIR Value Sets

MDHT on FHIR: Next Steps

- Complete UML profile for FHIR
 - Stereotypes for UML extensions and FHIR metadata
 - Evaluate use of ISO 11179-3 MDR profile as part of FHIR profile
- Complete FHIR to UML mapping and import/export
- Complete customized UI for editing UML FHIR profile models and FHIR metadata
- Integrate FHIR terminology services
 - Browse/search/create FHIR Value Sets
 - Assign concept semantic meaning to FHIR elements
- Validate FHIR structure definition models
 - Assure that UML FHIR profile models are valid structure definitions for base resource/profile
- Generation of Java APIs for FHIR constraint profiles

Questions for Implementers

- What can MDHT project do for FHIR that is of most benefit to implementers/developers?
 - FHIR profile design and artifact generation
 - Java libraries
 - Validation tools
- How would YOU like to get involved as a contributor to Eclipse.org MDHT?
