

SPL R7 / CPM R3 Additional Ballot Information

The Structured Product Label (SPL) release 7 and Common Product Model (CPM) release 3 ballot material released has certain defects due to technical difficulties. While the text of the ballot is correct, the model diagrams did not all get updated to reflect the text. In addition the XML Schema did not generate properly.

Because the ballot package can not be updated after the ballot is opened, this supplemental package offers corrected material for balloters to review. This material would be included as a correction to the ballot during the ballot reconciliation phase. The members of the SPL and CPM ballot pools are being informed by email that this material is available for their consideration as they review and vote on the ballot.

This review material is distributed as a ZIP file package with the following contents:

- spl-r7-cpm-r3-correction.pdf – this introduction
- spl-r7-cpm-r3-changes.xls – a spreadsheet workbook (with multiple sheets) detailing the requirements and changes from the previous SPL release 6 and CPM release 2, along with the models with those changes applied.
- SchemasR2b/SPL.xsd – the SPL schema along with the included schema files.

This material is made available under the URL <http://pragmaticdata.com/documents/spl-r7-cpm-r3-correction.zip>. It is recommended that the balloters review this material and consider it in their vote and comment.

If the balloter agrees with the text of the ballot along with the models here presented, optionally considering the schema as a way to test the proposed models, such balloter thus satisfied may provide an overall affirmative vote, submitting in free text comment that the balloter bases the vote on the consideration of this supplemental material. The resolution committee will consider these comments as affirmation that this supplemental material should be included in the ballot reconciliation process.

A balloter, who has other remarks, negative or affirmative line items, considering these supplemental materials, is encouraged to submit their items through the usual ballot spreadsheet, use one line item with a major negative requiring that this material be included in the standard, and then, optionally add their other negative or affirmative comments into the spreadsheet.
