Approved Projects

The TSC approved the following projects:

Microbiology Result Template Project for Orders & Observations WG at TSC Tracker # 1634, Project Insight # 586. The project will create a Microbiology Result Template which is a derivation of the existing Normative Laboratory Result RMIM. This template is used to define the components necessary to result Microbiology Organism Identification and Susceptibility Testing.

TSC Innovations Project for the TSC. See TSC Tracker # 1585 or Project Insight # 701. The scope of this project is to provide a clear process for soliciting innovative ideas and approaches relative to the design, development, publication, and implementation of HL7 standards. The Innovations process will be defined and managed by the TSC with input from the HL7 Board. The innovations project will monitor the health of HL7’s innovation management - this may be done by looking at practice in comparable organizations, feedback from members and stakeholders, and in other ways.

The TSC approved in-committee for circulation to the co-chairs and Affiliate chairs the U.S. Healthcare Readiness Project for the TSC at TSC Tracker # 1636. This project is limited to addressing HL7 activity related to “Meaningful Use”. Extending the scope to what is needed to support other US national initiatives was considered, however it will be easier to define clear tasks and deliverables if the scope is held tight. This will not prevent related activities from being initiated.
