Approved Projects
The TSC approved the following projects:

Creation of a set of RIMBAA whitepapers for the RIM-Based Application Architecture Work Group (RIMBAA) at TSC Tracker # 1677, Project Insight # 550. The goal of the project is to develop a set of whitepapers, balloted in-committee. The scope of the set of whitepapers is limited to those that answer the following question: “If one wishes to create a RIM based application, what are the architectural considerations one should take into account” or “how do I create a RIMBAA application”. This is a long running (maintenance type) project to create a set of whitepapers with the consensus based findings of the RIMBAA WG as to what the v3 implementation best practices (or: v3 implementation patterns) are.

Reaffirmation of Previous Normative CMET Ballots for the Modeling and Methodology Work Group (MnM), at TSC Tracker # 1643, Project Insight # 710. This project seeks to affirm the previous approval of 62 Common Model Element Type (CMET) specifications that had previously completed HL7 Normative balloting as version (or release) 03 through version (or release) 08.
