Project Approvals

Provenance for Clinical Document Architecture (CDA R2) Documents Implementation Guide for CBCC WG of DESD and cosponsored by SDWG of SSD SD at Project Insight 1093 and TSC Tracker 3314. The HL7 Data Provenance project will develop a specification that describes the constraints on CDA which are necessary to convey provenance data. The project scope will include broad perspectives of provenance including security, privacy, medical records, patient safety and other stakeholders. Much of this information has already been developed by HL7 and exists in multiple artifacts (e.g. CDA, C-CDA, DS4P IG etc). This project will help other parties interested in building provenance capabilities by allowing them to apply this specification as an overlay to their use cases.

Other Approvals

The TSC approved a revised Mission and Charter Statement Update for FGB

Harmonization Proposal

The TSC endorsed a proposal for Pattern Harmonization for the Unique Device Identifier (UDI). This pattern document describes how to implement Universal Device Identifiers in each of the HL7 standards families.

The TSC endorsed a final definition of implementation guide and conformance

Implementation Guide

An implementation guide is often created to organize a collection of conformance profiles, functional requirement specifications, or templates for specifying a set of related interactions described in a use case or use cases. Implementation guides typically describe broader conformance requirements such as application behavior. Such requirements may include how a set of interactions (messages, documents, etc.) are to be used to enact certain application functionality among applications (actors).

Conformance

Conformance relates an implementation to a standard. Any proposition that is true of the specification must be true in its implementation. (ISO, 2010).
