Advancing

Interoperability

- * Why is Interoperability taking so long?

- * HL7 Fresh Look. Happy Birthday FHIR.

- * HL7 Roadmap

- * Making it all work together

Is the Holy Grail of Interoperability really Plug & Play?

Credit: Monty Python

The Interoperability Blame Game.

“How much easier it is to be
critical than to be
correct.”

Benjamin Disraeli

Government

SDOs

“Can that be
accelerated to
next month?”

The Circle

If you're not guilty of *any* of
these
elements of the *Blame Game*,
you shouldn't be in the room.

The principles underlying
FHIR development
are meant to address the
challenges learned in
30 years of
open standards development.

Here are several principles
we learned the hard way.
I think they are the best kind
of lessons.

Principle #1

It's not architecture;
it's city planning.

Remaining relevant.

...not just interesting.

Principle #2

A standard is not used
because we created it.

It is a standard because people
use it.

“I can’t understand why people
are frightened of new ideas.
I’m frightened of the old ones.”

John Cage

Principle #3

Government regulation only
codifies standards.

Standards bring value
when they are adopted in the
marketplace.

Principle #4

For information models,
one size never
fits all.

Principle #5

The only standard that
never changes
is the standard you never use.

“Knowledge is knowing that a
tomato is a fruit.
Wisdom is not putting tomatoes in a
fruit salad.”

Peter Kay

Principle #6

There is an inherent
Standards Life Cycle,
either stated or implied.

The entire community of
stakeholders
rely upon that knowledge.

Principle #7

Emerging standards require a
Maturity Model.

Mature standards need a timeline
for
enhancement or sunseting.

“Perfection is achieved,
not when there is nothing
more to add,
but when there is nothing left
to take away.”

Antoine de Saint-Exupery

The HL7 Roadmap
must be visionary and keep promises.

FHIR enables an
evolutionary
development path
with
other HL7 standards*

* Many are embedded in Federal regulation

CDA on FHIR

- * Consolidated-CDA is embedded in Meaningful Use
- * Inconsistent implementation of C-CDA has been an impediment to interoperability
- * CDA on FHIR project has been developed to overcome that challenge

Collaboration

JASON Task Force & the Argonauts

SMART on FHIR

- * SMART is a 6-year project at Boston Children's Hospital, funded by ONC, based upon an API model to enhance health data interoperability
- * SMART has adopted FHIR as its standards-based API model
- * The goal of SMART is the creation of an "App Store" for healthcare

Sync for Science

- * Joint project of ONC, Harvard Medical School, EHR vendors and NIH
- * Leverages patient-donated genomic data for clinical research and Precision Medicine
- * Relies upon open APIs and FHIR

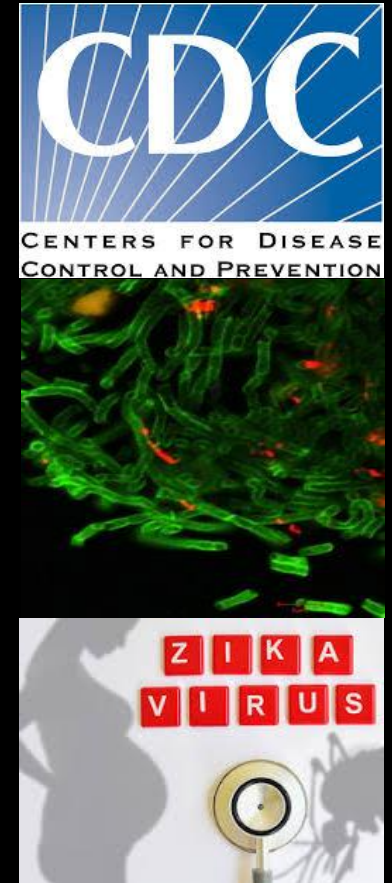

openFDA Initiative

CMS is coordinating a
diverse ecosystem of
developers for creation of
the Blue
Button on FHIR

Public Health Reporting

Mobile Health is...

...more than clinical data on a smart phone.

More than three hundred
clinical organizations, IT
developers, government agencies
and healthcare systems *worldwide*
are now committed to developing
FHIR applications

Clinical Professional Societies

Payer Summit Implementing FHIR

HL7 International Genomics Summits

Next Summit: October 26-28, Washington

Partners in
Interoperability™

FHIR Applications Roundtable

- * Showcase for FHIR Apps & Development tools
- * Platform for best practices & collaboration
- * Apps & tools in demonstration environment
- * Harvard Medical School, July 27-28
Duke University, March 8-9, 2017

- Reference implementations & task tracking
- Community Forum & Help Desk
- Resources for conformance testing and public reference implementations

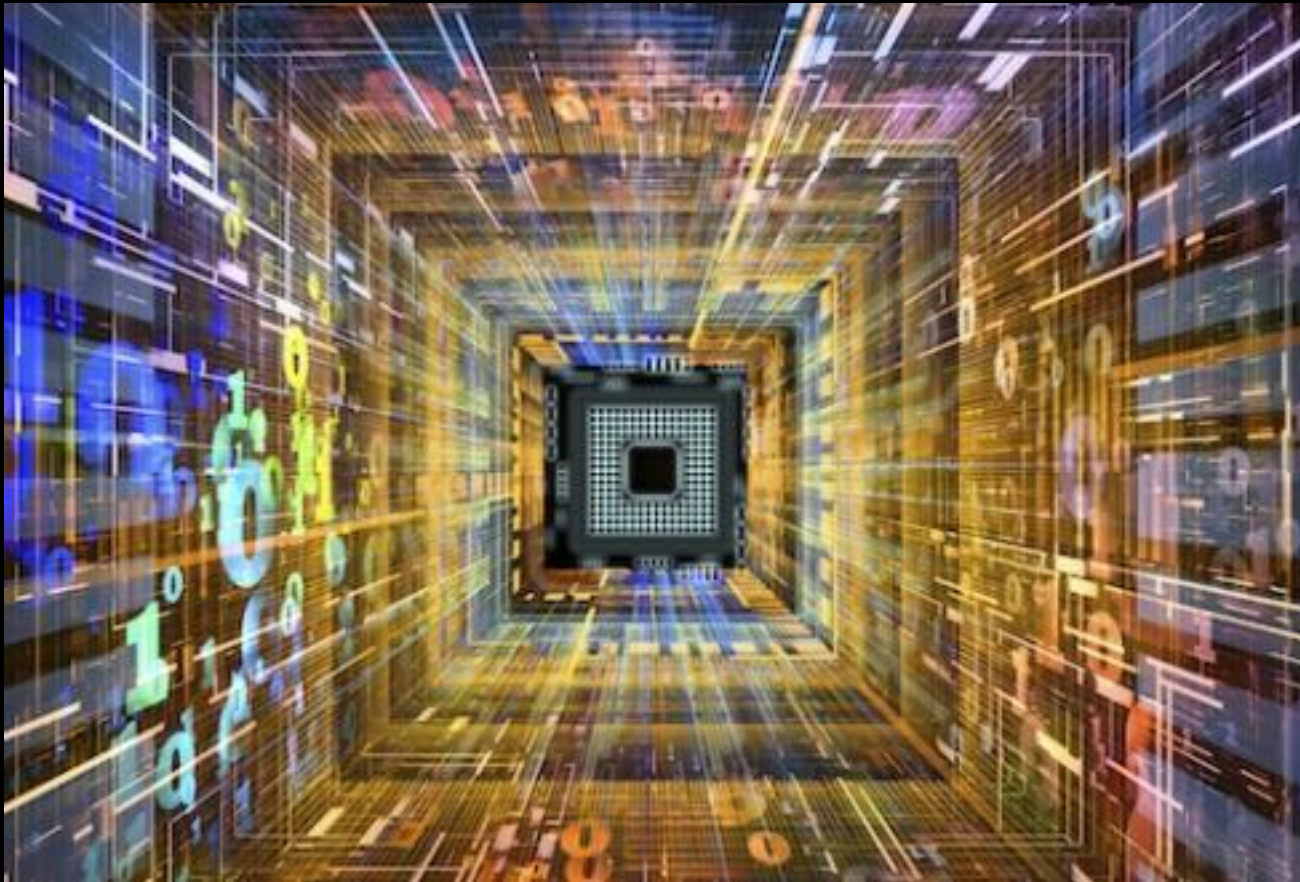

“We can’t solve problems with
the same kind of thinking **when**
we created them.”

Albert Einstein

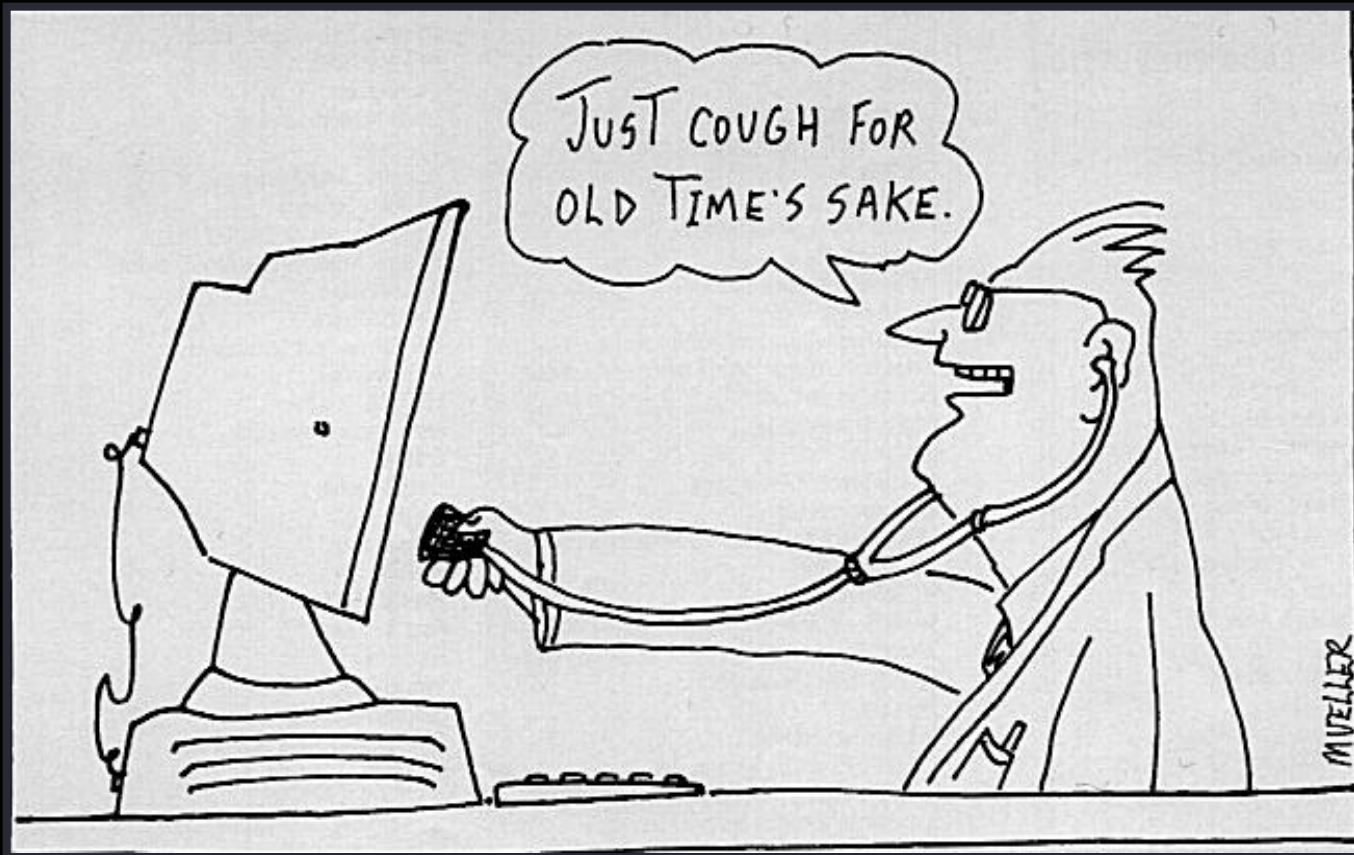

“It’s not enough to show up.
You’ve got to have a Business Plan.”

Analytics may be the answer, but
you can't get there with bad data.

Thanks
